

# CLOSER THAN MARS

Jason A. Heald 9/03

**Bossa nova**

1 *mf* 3

6 *mp*

We could be clo - ser than Mars with a love much

6 *p*

11

big - ger than Ju - pi - ter, with pas - sion hot - ter than the hills of Mer - cu -

11

16

ry. We'd live a life full of won - der as rich as all the col - ors in the rings of Sat - urn.

21

But we stand as cold as a Nep - tune sea.

26

Plan - ets of a kind cir - cle through the sky,

30 un - a - ware of the pull they have on each oth - er.

34 Your grav - i - ty tugs as you or - bit me.

38 Bod - ies that at - tract will find a gal - ax - y to share. We could be

42

clos - er than Mars with a love much big - ger than Ju - pi - ter with pas - sion hot - ter than

*p*

47

the hills of Mer - cu - ry. We'd live a life full of won - der, rich as the

52

col - ors in all the rings of Sat - urn. But we stand as cold as a Nep - tune

57

sea. The at - mos - phere will change when you are near.

62

A per - fect night for Lu - nar ex - plor - a - tion.

66

A rush of cos - mic flight at the speed of light,

71

More than just a theo-ry, rel - a - tiv - it - y is here. We could be

75

clo - ser than Mars with a love much big - ger than Ju - pi - ter, and

79

pas - sion hot - ter than the hills on Mer - cu - ry. We'll live a life full of won-

84

der, rich - er than the col - ors in the rings of Sat - urn. But we stand as cold

88

as a Nep - tune sea. To - night, we'll

93

melt po - lar ice - caps when love pre - vails. To - night,

97

We'll grab a comet by the tail. It will pull us closer than Mars

101

with a love much bigger than Jupiter, and passion hotter than the hills of

106

Mercury. We'll live a life full of wonder, as rich as the colors in the

111

rings of Sat - urn. Thaw a heart as cold as a Nep - tune sea.
